Amendments to the Abstract:

Please replace the Abstract with the following:

A pneumatic arrangement ~~comprising~~ including a plurality of servicing modules for the preparation of compressed air which are arranged on a common bus system adjacent to each other. Furthermore a control module for the implementation of control ~~or/or~~ and/or monitoring functions and/or communication functions is connected with the bus system for the servicing modules. In addition a valve arrangement is connected with the common bus system, the control module also being adapted for the performance of control ~~or/or~~ and/or monitoring functions for the valves of the valve arrangement, the valve arrangement constituting a subassembly with the servicing modules. As a result only one single control module is required for the servicing modules and the valve arrangement, there being a compact subassembly without unsupported connecting lines.
